

Belle II CPU Resource Accounting

Andreas Gellrich
DESY IT

B2CSG
06 Feb 2017

- > We need thorough accounting to plan computing needs and justify pledges
- > BPAC asked for a thorough assessment of the resource usage

- > Computing resources
 - CPU cycles normalized [cpu/wall time*HS06*h] (*Jobs are transient*)
 - Storage accumulating [used volume / TB] (*Files are persistent*)
 - (Network bandwidth [peak usage / Gbps ?] (*widely shared*))

- > Our experiences at DESY have showed that accounting / pledging is not trivial
 - Technically challenging (APEL)
 - Interpretation of data (VO view vs. admins view vs. managers view)
 - Dealing with opportunistically used resources (surplus)

> EGI Accounting

- The EGI Accounting Portal is an EGI service provided by CESGA

> OSG Accounting

- *Gratia* (contributed as an OSG activity, Grid Accounting)

> Else

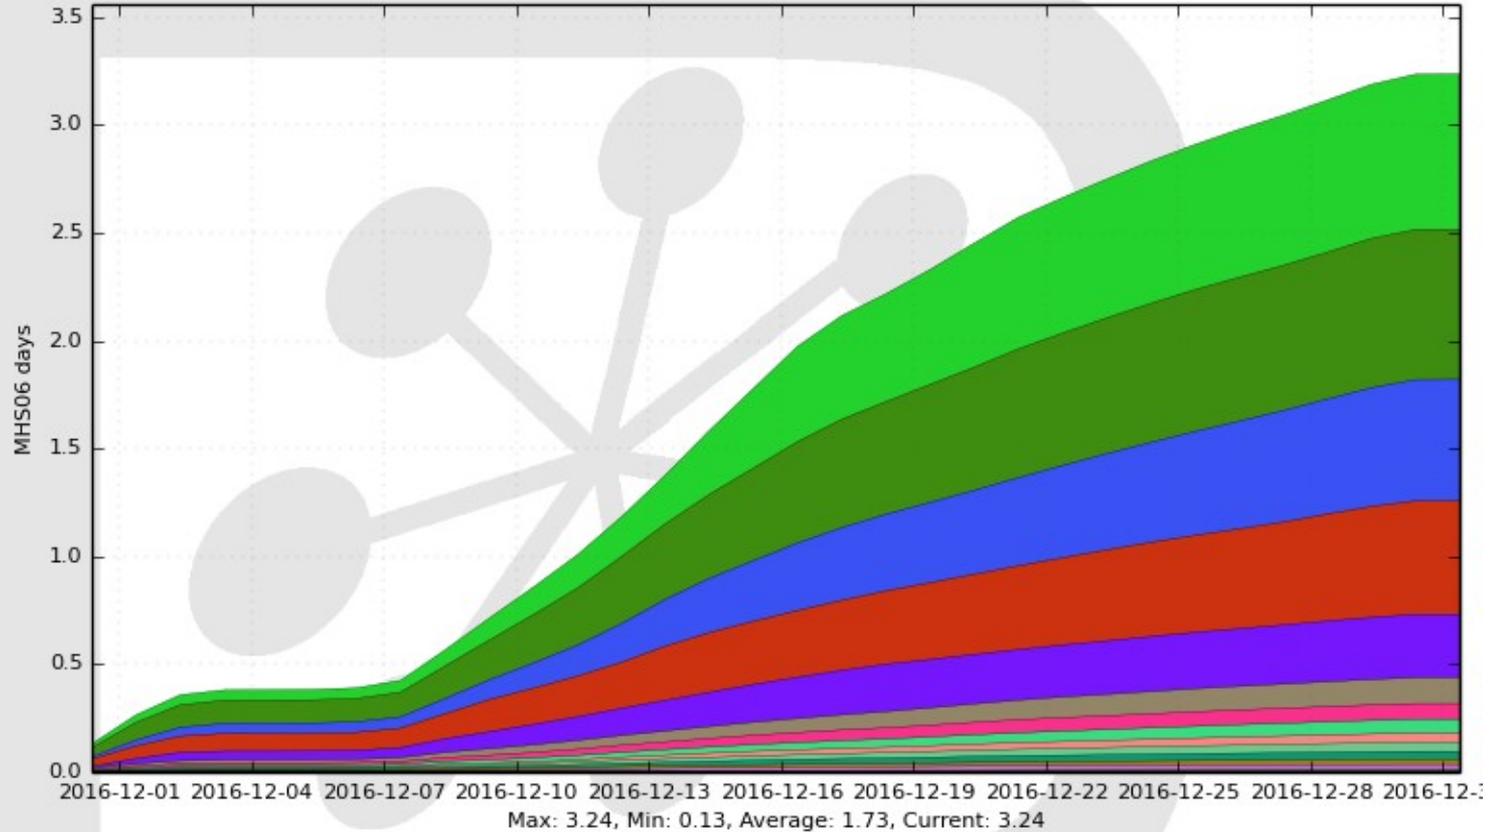

- Clouds / HPC / Trigger farms of non-EGI / non-OSG sites

> DIRAC Accounting

- Pilot Frame work
- Belle II MC production is exclusively handled by DIRAC
- HEPSPREC06 values are part of the site configs in DIRAC
- <https://dirac.cc.kek.jp>

Normalized CPU used by Country

31 Days from 2016-11-30 to 2016-12-31

> December 2016 data (busiest month of MC7)

Country	Used [kHS06]	Pledged [kHS06]
Japan	23	32
Canada	22	4
Germany	18	18
Italy	17	17
USA	9	20
Czech	4	1.7
Russia	2.1	12
Korea	2.0	7
Austria	1.4	2.6
Australia	1.4	4.3
Mexico	1.1	2.6
Poland	0.8	3
India	0.7	5
...
Total	140	148

- > We considered EGI Account Portal (APEL), OSG (Gratia), DIRAC
- > We had contact the Cath Noble (CERN) of EGI who gave some instructions
- > DIRAC is run by Ueda-san et al.

- > For now DIRAC seems to be most complete
- > More understanding of DIRAC vs. EGI needed though
- > DIRAC has fixed HS06 / site
- > EGI can be automated

- > For BPAC:
 - December 2016 was the busiest month for Belle II
 - (Only) in December 2016 Belle II was close to the pledges
